Solução do Exercicio 4 - Jayme de Queiroz

1- Utilizando a rede do desafio:

```python
import networkx as nx
import pandas as pd

#Load GraphMissingEdges
G = nx.read_gml("../GraphMissingEdges.gml")
```

a- Itendifique comunidades usando o método Leiden ou Louvain.

```python
import community as community_louvain
import matplotlib.cm as cm
import matplotlib.pyplot as plt
#first compute the best partition
partition = community_louvain.best_partition(G)
print(partition)
print(len(partition.values()))
# draw the graph
pos = nx.spring_layout(G)
# color the nodes according to their partition
cmap = cm.get_cmap('viridis', max(partition.values()) + 1)
nx.draw_networkx_nodes(G, pos, partition.keys(), node_size=40,
                       cmap=cmap, node_color=list(partition.values()))
nx.draw_networkx_edges(G, pos, alpha=0.5)
plt.show()
```

b- Identifique comunidades utilizando o k-clique. Utilize k=4.

In [ ]:
```python
k_clique_communities = list(nx.algorithms.community.k_clique_communities(G, 4))

for member in k_clique_communities:
    print(sorted(list(member)))
```

Faz sentido, cada comunidade parece apresentar um publico alvo e uma grande categoria.

Por exemplo, a grande categoria do lugar pode ser: "Comida Extrangeira", "Comida nacional", "Cafés", "Bares" e "Noturnos"

E publico alvo: "Asiaticos", "Latinos", "Jovens", "Bohemios", "Classicos", "Ricos"

A partir desta visualização podemos concluir que é viável diminuir a dimensionalidade da categoria. E criar uma nova feature "publico alvo"
